Fertiliser spreading in Block H & J
Bed forming in Blocks J
Cultivate vine strip in Blocks J.
Block H, I & J post mark out.
Post installation in Blocks H, I & J
Irrigation installation in Blocks H, I & J.

VITICULTURAL COMMENTS

Total rainfall and rain days were above the long term average in October and rainfall continued into November with three days of rainfall and 28 mm falling. The vineyard remains wet with a number of boggy sections and areas slippery making traffic through sections of the vineyard difficult. We have a few dry days before the forecast of more wet weather this week.

Disease pressure remains high which will increase the number of budgeted foliar sprays this season. As chemical supplies have become extremely tight and some difficult to find we have secured a fungicide for two Downy Mildew eradicator/protectant sprays and a late season fungicide to help prevent Botrytis.
