Commence mid row rut repairs
Commence foliage wire lifts
Undervine herbicide Block G
Continue install vine guards block J
Complete cordon wire straining block J
Clean up burn pile, ash wire & debris

VITICULTURAL COMMENTS

It is good to see a move to drier weather. The vineyards are drying out making it easier to get around. The cool, wet conditions over the past few months has slowed vine growth and we are now around three weeks behind average growth stage. Vine vigour has picked up over the past few weeks. The weather during flowering has been less than ideal with mainly cool, windy days and four wet days during flowering.

Disease pressure remains high with Downy Mildew appearing in vineyards across many regions. More rain is forecast this week, we have fungicides in stock to help control Downy Mildew and this will be utilised in blocks where oil spots are found.
